

Mariia Danilova

QA Engineer (manual) remotely

👤 Profile

I'm a Manual QA with a healthcare market research background and two years of crowd testing experience. Currently, I'm freelancing on a SaaS startup project. Use my eyes, hands, test design techniques and tools like Chrome DevTools and Postman to ensure product quality.

I'm familiar with Agile, particularly Kanban.

I'm a quick learner, great at working with others, and I value good relationships with my colleagues (I always try to be careful when telling a developer about bugs to avoid hurting his feelings)

I am searching for a remote project where I can apply my skills and knowledge to benefit the company, while also gaining valuable testing insights from experienced colleagues.
